set project to x64 target (see below)

Build Settings - x64

Author: Brent Buchholz

Copy the SQLite.Interop.dll from the bin/Debug/x64 folder to the top level project folder (NwdVoiceMemoBrowser below). Set Build Action to Content and Copy to Output Directory to Copy Always. That fixed it for both NwdImageBrowser and NwdVoiceMemoBrowser (and I suspect its going to come up in any project using SQLite)
