## Sqlite.Interop.dll error solution

**Author:** Brent Buchholz

set project to x64 target (see below) Mtp COM runs into errors on delete with project set to x64, x86 works with both Sqlite and Mtp

## Build Settings - x64 x86

**Author:** Brent Buchholz

Copy the Sqlite.Interop.dll from the **bin/Debug/x64** folder to the top level project folder (NwdVoiceMemoBrowser below).

Set Build Action to Content and Copy to Output Directory to Copy Always. That fixed it for both NwdImageBrowser and NwdVoiceMemoBroser (and I suspect its going to come up in any project using Sqlite)
